

Hands on Science

Preschool is a sensible phase and the child is very curious and eager to explore various concepts from his environment.

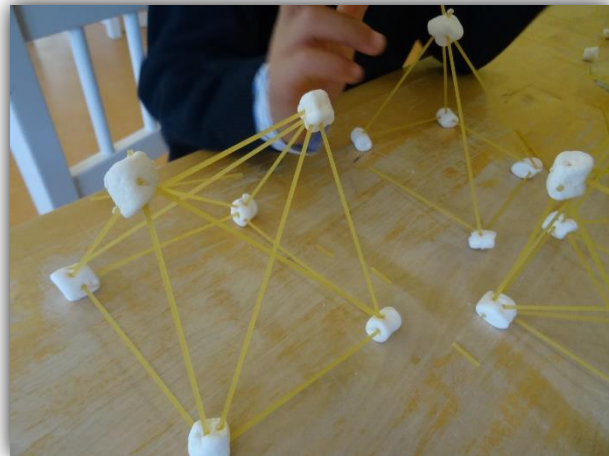

At this age children are curious and ask questions about what they see. They are able to learn important concepts and these science activities will give them the opportunity to learn something new and in a playful way.

The science activities are fun, they can be impressive too and they definitely allow your child to wonder and question his experiments.

Below you can find the major benefits of enrolling your child in our *Hands on Science* (after-school) program as a tool for early childhood education:

- **Favors Concentration Skills**
- **Helps Comprehend Math concepts**
- **Encourages Group Cooperation**
- **Trains Eye-Hand Coordination**
- **Helps builds strong self-confidence**
- **Brings-out Creativity**

Hands on Science

Hands on Science Instructor

Isabelle Etter has a Masters of Education degree from Loyola College in Maryland, an AMI Montessori Diploma from the Montessori Institute of San Diego and a Diploma of the Institute of Social Studies in Geneva.

She has been giving this class guiding children to observe what nature has to offer. She enjoys making fun science experiments with the children and see their curiosity, their excitement and share their comments.

Isabelle has been teaching Montessori children for the past 16 years, bringing science into the classroom or have outdoor experiences. She currently works at Montessori Seeds of Knowledge in Vich, Switzerland.
